Brand	Borg digital locks
Product type	Borg digital locks

Product Description

Combining a specially designed lockcase with a marine grade keypad, the BL3000 gate lock series is designed for metal box section gates.

This model comes with a knob turn device on the outside, an inside handle with optional holdback and an easicode pro code changing mechanism, allowing a quick, on the door code change.

Combining a specially designed lockcase with a marine grade keypad, the BL3100 ECP gate lock series is designed for metal box section gates. The lockcase utilizes a forend fixing system to ease up any fitting issues.

The BL3100 ECP in particular comes with a knob turn keypad and anti-climb housing, both of which are salt spray tested for 1000 hours. The latch bolt is fully adjustable and, like the keypad, is fully reversible to allow it to suit left and right handed hung gates of many different thicknesses.

Separating the Easicode Pro range from the conventional locks is the patented “On the door” code change method. With this, the long and drawn out method of removing tumblers from the back of the keypad is over, cutting down what could be a 10-15 minute job to one that takes only 30 seconds.

This model comes with a knob turn keypad one side, a inside handle on the other and security fixings to allow it to remain safe and secure in position. This is suited for external metal box section gates between 30-60mm on standard fixings. A XL latchbolt is available to suit profiles up to 120mm as an optional extra (part S311a).

Brand Profile

Borg digital locks

Borg (trading as **Borg Locks**) is a UK access-control brand best known for **mechanical, keyless push-button door and gate locks**: the classic “no batteries, no wiring, just a code” approach that’s popular for shared doors, staff entrances, plant rooms, gates, and anywhere keys inevitably get lost, copied, or ceremonially dropped down a drain.

Borg has been **designing, creating, and distributing mechanical access-control devices since 1997**, with a product line built around different duty levels and environments - from light internal use to heavy-duty commercial traffic.

The range is deliberately broad and application-led: Borg markets keypad locks for **timber doors, steel doors, aluminium doors, gates**, plus specialist lines like **fire-tested keypads** and **marine-grade/weather-resistant** options for exposed installations.

A big “Borg-ism” you’ll see repeatedly is **easy code management -** for example their **Easicode Pro (ECP)** range is designed for **on-the-door code changes** without removing the lock (useful for rentals, staff turnover, site access, etc.).
