## Product Description

Combining a specially designed lockcase with a marine grade keypad, the BL3000 gate lock series is designed for metal box section gates. This particular model comes equipped with a key override and deadbolt function as standard as well as keypads both sides.

Combining a specially designed lockcase with a marine grade keypad, the BL3000 gate lock series is designed for metal box section gates. The lockcase utilizes a forend fixing system to ease up any fitting issues.

The BL3130DKO in particular comes with back to back knob turn keypad and anti-climb housing, all of which are salt spray tested for 1000 hours. The latch bolt is fully adjustable and, like the keypad, is fully reversible to allow it to suit left and right handed hung gates of many different thicknesses.

This particular model however, separates itself from the conventional BL3130 with the inclusion of a key override. This allows entry with a separate key and offers a deadbolt function as standard.

This model comes with a knob turn keypads on both sides, both with separate coding chambers. This allows separate codes to be inserted on each keypad if needed and makes sure that the code is required both to enter and exit. This is suited for external metal box section gates between 30-60mm on standard fixings. An XL latchbolt is available to suit profiles up to 120mm as an optional extra (part S311a).

## Brand Profile

Borg digital locks

**Borg** (trading as **Borg Locks**) is a UK access-control brand best known for **mechanical, keyless push-button door and gate locks**: the classic “no batteries, no wiring, just a code” approach that’s popular for shared doors, staff entrances, plant rooms, gates, and anywhere keys inevitably get lost, copied, or ceremonially dropped down a drain.

Borg has been **designing, creating, and distributing mechanical access-control devices since 1997**, with a product line built around different duty levels and environments - from light internal use to heavy-duty commercial traffic.

The range is deliberately broad and application-led: Borg markets keypad locks for **timber doors, steel doors, aluminium doors, gates**, plus specialist lines like **fire-tested keypads** and **marine-grade/weather-resistant** options for exposed installations.

A big “Borg-ism” you’ll see repeatedly is **easy code management -** for example their **Easicode Pro (ECP)** range is designed for **on-the-door code changes** without removing the lock (useful for rentals, staff turnover, site access, etc.).
