Product type	Borg digital locks

Product Description

The BL4400 ECP series is our medium tier of marine grade, Easicode Pro locks. Designed for use on timber gates, this unit comes with fully marine grade, stainless steel fixings and specially e-plated marine grade material to survive arduous conditions.

This unit comes with a lever handle keypad and an internal slam latch.

The BL4400 ECP series uses the same keypad found on our popular BL3400 ECP series. Equipped with a range of different latches and fixings, this medium-heavy duty range of locks is coated in the specialist MG Pro coating to

allow it the survive in the harshest conditions.

The BL4409 ECP is available with a rim fixed slam latch. Designed for applications where the gate is too narrow for any mortice latch. Fitted in place of the inside handle, this offers a solution for applications where conventional locks may not work.

With this, comes the Easicode Pro coding chamber. A unique, patented product from ourselves, this carries a “on the door” code change method, eliminating the 10-15 minutes of hassle and eliminates any risk of damage caused by a faulty code change.

This model is designed to work as a medium-heavy duty model for external use. Sharing the same footprint as the BL2600 and BL2600 ECP, this can be used as a direct upgrade without the need of filling or drilling new holes. This is suited and designed for use on external wooden and timber gate applications.

Brand Profile

Borg digital locks

Borg (trading as **Borg Locks**) is a UK access-control brand best known for **mechanical, keyless push-button door and gate locks**: the classic “no batteries, no wiring, just a code” approach that’s popular for shared doors, staff entrances, plant rooms, gates, and anywhere keys inevitably get lost, copied, or ceremonially dropped down a drain.

Borg has been **designing, creating, and distributing mechanical access-control devices since 1997**, with a product line built around different duty levels and environments - from light internal use to heavy-duty commercial traffic.

The range is deliberately broad and application-led: Borg markets keypad locks for **timber doors, steel doors, aluminium doors, gates**, plus specialist lines like **fire-tested keypads** and **marine-grade/weather-resistant** options for exposed installations.

A big “Borg-ism” you’ll see repeatedly is **easy code management -** for example their **Easicode Pro (ECP)** range is designed for **on-the-door code changes** without removing the lock (useful for rentals, staff turnover, site access, etc.).
