Specification Summary

Brand	Borg digital locks
Product type	Borg digital locks

Product Description

The BL5000 ECP series represents a medium to heavy duty lock with a fully clutched, round bar handle. This keypad comes with an optional free passage mode, allowing a bypass of the coding mechanism. Furthermore, the ECP range comes with an on the door code change mechanism, allowing a quick and easy recoding function.

This unit comes with no device or latch supplied, to be fitted with an existing set up.

The BL5400 ECP series represents a medium to heavy duty lock where lighter duty locks just won't handle it. Offering a fully clutched round bar handle, this lock can be suited for most different applications out there. When fitting on a front door, a secondary BS rated euro cylinder or a BS certified sash lock is recommended for use in conjunction.

Each BL5400 ECP series offers a optional free passage mode, enabling a bypass mode to deactivate the coding chamber. Until deactivated, this allows you to enter without the need to enter the code.

With this, comes the Easicode Pro coding chamber. A unique, patented product from ourselves, this carries a "on the door" code change method, eliminating the 10-15 minutes of hassle and eliminates any risk of damage caused by a faulty code change.

This variation comes with no device supplied for times when a latch is already present and available for usage. Suitable for internal and sheltered external use on wooden, composite and steel doors.

Brand Profile

Borg digital locks

Borg (trading as **Borg Locks**) is a UK access-control brand best known for **mechanical, keyless push-button door and gate locks**: the classic “no batteries, no wiring, just a code” approach that’s popular for shared doors, staff entrances, plant rooms, gates, and anywhere keys inevitably get lost, copied, or ceremonially dropped down a drain.

Borg has been **designing, creating, and distributing mechanical access-control devices since 1997**, with a product line built around different duty levels and environments - from light internal use to heavy-duty commercial traffic.

The range is deliberately broad and application-led: Borg markets keypad locks for **timber doors, steel doors, aluminium doors, gates**, plus specialist lines like **fire-tested keypads** and **marine-grade/weather-resistant** options for exposed installations.

A big “Borg-ism” you’ll see repeatedly is **easy code management -** for example their **Easicode Pro (ECP)** range is designed for **on-the-door code changes** without removing the lock (useful for rentals, staff turnover, site access, etc.).
