## Product Description

The BL5000 series represents a medium to heavy duty lock with a fully clutched, flat bar handle. This keypad comes with an optional free passage mode, allowing a bypass of the coding mechanism. The BL5401 FT is fitted with an intumescent kit, along with stainless steel fixings for  use on 30 minute and 60 minute fire doors.

This unit comes with a 60mm tubular latch.

Independent successful fire resistance test was carried out by BM Trada for 30 and 60 minutes in accordance with BS EN1634-1 and BS EN1363-1. Each fire tested kit comes fully supplied with the required stainless steel fittings and intumescent kits to keep it fully in accordance with the required certification.

The BL5000 series represents a medium to heavy duty lock where lighter duty locks just won’t handle it. Offering a fully clutched flat bar handle, this lock can be suited for most different applications out there.

Each BL5403 offers a optional free passage mode, enabling a bypass mode to deactivate the coding chamber. Until deactivated, this allows you to enter without the need to enter the code.

This variation comes with a 60x72mm euro profile lockcase. Suitable for internal and sheltered external use on wooden, composite and steel doors.

## Brand Profile

Borg digital locks

**Borg** (trading as **Borg Locks**) is a UK access-control brand best known for **mechanical, keyless push-button door and gate locks**: the classic “no batteries, no wiring, just a code” approach that’s popular for shared doors, staff entrances, plant rooms, gates, and anywhere keys inevitably get lost, copied, or ceremonially dropped down a drain.

Borg has been **designing, creating, and distributing mechanical access-control devices since 1997**, with a product line built around different duty levels and environments - from light internal use to heavy-duty commercial traffic.

The range is deliberately broad and application-led: Borg markets keypad locks for **timber doors, steel doors, aluminium doors, gates**, plus specialist lines like **fire-tested keypads** and **marine-grade/weather-resistant** options for exposed installations.

A big “Borg-ism” you’ll see repeatedly is **easy code management -** for example their **Easicode Pro (ECP)** range is designed for **on-the-door code changes** without removing the lock (useful for rentals, staff turnover, site access, etc.).
