Specification Summary

Brand	Borg digital locks
Product type	Borg digital locks

Product Description

The BL6003 is our unique design, incorporating the need for a narrow stile door section lock not often seen on the market. With a body width of just 45mm, this lock is ideal for areas where conventional locks just wont fit including UPVC doors.

This lock incorporates a single column of 8 buttons, each offering a double button press system, allowing digits to appear twice in the code. The free turning handle is permanently clutched to provide no handle resistance if the correct code is not entered. This model also features a free passage mode that, when enabled, bypasses the coding chamber to allow access without the need of entering the code all of the time until it is disabled once more. This mode is optional and can be fully disabled should it never be needed.

The BL6003 is supplied with a 28mm ‘Ali’ latch for use on narrow stile doors where a standard mortice latch will be too large..

Due to the handle rotation, this is ideal for use with multi-point latches. This lock is suitable for internal and sheltered external narrow stile UPVC, aluminium, composite and wooden doors.

Brand Profile

Borg digital locks

Borg (trading as **Borg Locks**) is a UK access-control brand best known for **mechanical, keyless push-button door and gate locks**: the classic “no batteries, no wiring, just a code” approach that’s popular for shared doors, staff entrances, plant rooms, gates, and anywhere keys inevitably get lost, copied, or ceremonially dropped down a drain.

Borg has been **designing, creating, and distributing mechanical access-control devices since 1997**, with a product line built around different duty levels and environments - from light internal use to heavy-duty commercial traffic.

The range is deliberately broad and application-led: Borg markets keypad locks for **timber doors, steel doors, aluminium doors, gates**, plus specialist lines like **fire-tested keypads** and **marine-grade/weather-resistant** options for exposed installations.

A big “Borg-ism” you’ll see repeatedly is **easy code management -** for example their **Easicode Pro (ECP)** range is designed for **on-the-door code changes** without removing the lock (useful for rentals, staff turnover, site access, etc.).
