Product Description

The Borg 7000 Series Handle Return Spring is a genuine replacement part designed to restore the smooth, reliable operation of your digital lock's handles. Over time and with heavy use, internal springs can wear out or break, causing the handle to sag or fail to return to its upright, horizontal position. This replacement spring is the ideal solution to resolve handle sag without needing to replace the entire lock unit.

Specifically engineered for the Borg BL7000 Easicode series, this high-quality spring is versatile enough to suit both the keypad (outside) side and the inside handle. By replacing a broken or weakened spring, you ensure that the handle returns easily under its own pressure, maintaining the security and functionality of your access control system. It is a cost-effective maintenance spare part for high-traffic commercial or residential environments where Borg 7000 series locks are installed.

Technical Specifications

- **Brand:** Borg Accessories
- **Compatibility:** Borg BL7000 Easicode series digital locks
- **Application:** Suitable for both the keypad (outside) side and the inside handle
- **Function:** Replacement handle return spring

Key Features

- **Restores Handle Operation:** Corrects sagging or loose handles by restoring the self-returning spring pressure.
- **Genuine Replacement Part:** High-quality spare component designed specifically for the Borg BL7000 series.
- **Cost-Effective Maintenance:** Avoids the expense of replacing the entire digital lock unit by swapping out only the worn spring.
- **Dual-Sided Compatibility:** Works seamlessly on both the keypad side and the internal handle.
