## Product Description

The BL2600 series is part of the Marine Grade series of mechanical locks. Undergoing a specialist e-plating process that has been salt spray tested to over 1000 hours and having all critical internals made of the highest standard of stainless steel, the unit is designed for continued usage in the harshest conditions. This offers a solution where compliance to the ISPS code is essential and it’s neither convinient or feasible to use a electronic or key driven access control solution.

With it being cycle tested to 100,000 cycles to show it’s durability, the BL2605 represents the medium tier of small, mechanical keypad locks. This keypad comes with over 8000 potential combinations.

This lock is designed for applications that is too narrow to contain a regular mortice latch. As a result, the BL2605 comes with a rim fixed deadbolt in replacement for the inside handle, providing an ideal way of securing a thinner gate.

This lock is suitable for external use on timber and composite doors and gates.

This lock is now supplied as the Easicode version. This means you don't need to take the lock off the door/gate to change it.

## Brand Profile

Borg digital locks

**Borg** (trading as **Borg Locks**) is a UK access-control brand best known for **mechanical, keyless push-button door and gate locks**: the classic “no batteries, no wiring, just a code” approach that’s popular for shared doors, staff entrances, plant rooms, gates, and anywhere keys inevitably get lost, copied, or ceremonially dropped down a drain.

Borg has been **designing, creating, and distributing mechanical access-control devices since 1997**, with a product line built around different duty levels and environments - from light internal use to heavy-duty commercial traffic.

The range is deliberately broad and application-led: Borg markets keypad locks for **timber doors, steel doors, aluminium doors, gates**, plus specialist lines like **fire-tested keypads** and **marine-grade/weather-resistant** options for exposed installations.

A big “Borg-ism” you’ll see repeatedly is **easy code management -** for example their **Easicode Pro (ECP)** range is designed for **on-the-door code changes** without removing the lock (useful for rentals, staff turnover, site access, etc.).
