Product Description

The BL2900 easicode series is the ideal retro-fit upgrade for our own standard BL2000 and competitors equivalent 2000 style models, where frequent code changing is required. No longer will it be necessary to have to fiddle about with removing tumblers; the code can be changed in the hand with a simple push and twist with the code change tool provided for each button. Using our patented load plate design the BL2900 is also secure; so it won't be possible to determine the code by the button feel; making the BL2900 the securest option for lower traffic applications.

Features:

- New Easicode changing method no tumblers to remove,
- Retro-fits virtually all 130mm fixing centred equivalent locks,
- Easy grip anti-ligature knob turn,
- Patented load plate design eliminates code cracking attempts,
- Cycle tested to 50,000 operations,
- 60mm latch as standard (28, 50 & 70mm available),
- Optional holdback function (2901 HB model),

Brand Profile

Borg digital locks

Borg (trading as **Borg Locks**) is a UK access-control brand best known for **mechanical, keyless push-button door and gate locks**: the classic “no batteries, no wiring, just a code” approach that’s popular for shared doors, staff entrances, plant rooms, gates, and anywhere keys inevitably get lost, copied, or ceremonially dropped down a drain.

Borg has been **designing, creating, and distributing mechanical access-control devices since 1997**, with a product line built around different duty levels and environments - from light internal use to heavy-duty commercial traffic.

The range is deliberately broad and application-led: Borg markets keypad locks for **timber doors, steel doors, aluminium doors, gates**, plus specialist lines like **fire-tested keypads** and **marine-grade/weather-resistant** options for exposed installations.

A big “Borg-ism” you’ll see repeatedly is **easy code management -** for example their **Easicode Pro (ECP)** range is designed for **on-the-door code changes** without removing the lock (useful for rentals, staff turnover, site access, etc.).
