Specification Summary

Brand	Borg digital locks
Product type	Borg digital locks

Product Description

The BL5251 is the marine grade version of the popular BL5000 series. The BL5251 represents a medium to heavy duty lock where lighter duty locks just won’t handle it. With our specialized e-plated material and fully stainless steel interiors, this keypad will survive most situations for years to come. This comes with a back to back marine grade keypads and a marine grade 60mm tubular latch.

The BL5200 series is part of the Marine Grade series of mechanical locks. Undergoing a specialist e-plating process that has been salt spray tested to over 1000 hours and having all critical internals made of the highest standard of stainless steel, the unit is designed for continued usage in the harshest conditions. This offers a solution where compliance to the ISPS code is essential and it’s neither convenient or feasible to use a electronic or key

driven access control solution.

This comes as a back to back model, with a keypad replacing the standard internal handle, requiring a code to both enter and exit. Each keypad comes with independent coding chambers, allowing different codes on either side should this be required. Each have over 8000 combinations and are independently cycle tested to 50,000 operations.

The BL5251 represents a medium to heavy duty lock where lighter duty locks just won’t handle it. Offering a fully clutched r bar handle, this lock can be suited for most different applications out there.

Each BL5251 offers a optional free passage mode, enabling a bypass mode to deactivate the coding chamber. Until deactivated, this allows you to enter without the need to enter the code.

This variation comes with a 60mm tubular latch. Suitable for external use on wooden, composite and steel doors.

Brand Profile

Borg digital locks

Borg (trading as **Borg Locks**) is a UK access-control brand best known for **mechanical, keyless push-button door and gate locks**: the classic “no batteries, no wiring, just a code” approach that’s popular for shared doors, staff entrances, plant rooms, gates, and anywhere keys inevitably get lost, copied, or ceremonially dropped down a drain.

Borg has been **designing, creating, and distributing mechanical access-control devices since 1997**, with a product line built around different duty levels and environments - from light internal use to heavy-duty commercial traffic.

The range is deliberately broad and application-led: Borg markets keypad locks for **timber doors, steel doors, aluminium doors, gates**, plus specialist lines like **fire-tested keypads** and **marine-grade/weather-resistant** options for exposed installations.

A big “Borg-ism” you’ll see repeatedly is **easy code management -** for example their **Easicode Pro (ECP)** range is designed for **on-the-door code changes** without removing the lock (useful for rentals, staff turnover, site access, etc.).
