Specification Summary

Brand	Codelocks
Product type	CL200 Series

Product Description

The CL0290 MB Back To Back Digital Lock from the Marine by Codelocks 200 series is a premium mechanical digital lock designed for both internal and external installations. Equipped with dual keypads, this lock provides secure, coded access from both sides of the door, making it ideal for restricted areas, gates, and shared entryways.

Engineered to withstand the harshest environments, this marine-grade lock has been salt spray tested to 1,000 hours and features neoprene seals, making it exceptionally resilient against coastal conditions and extreme weather. The lock features a sleek black finish with robust stainless steel buttons and is supplied with an anti-slip 60mm mortice latch. The spring-loaded latchbolt automatically locks when the door is closed, ensuring continuous security.

With up to 8,191 non-sequential code combinations, the lock offers reliable access control. It is suitable for doors with a thickness of 35mm to 65mm and can be fitted to 30 or 60-minute fire doors when used with the appropriate Codelocks Fire Kit Pack (sold separately).

Technical Specifications

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that's built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks' system for generating **time-sensitive access codes** (think "this code works from 2pm–6pm on Tuesday" rather than "this code works until the heat death of the universe"). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the "serious door" end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the "commercial door that gets slammed 400 times a day" vibe.
