Specification Summary

Brand	Codelocks
Product type	CL100 Series

Product Description

The Codelocks CL155 Digital Lock is an entry-level mechanical push-button lock from the popular CL100 series, designed to provide reliable, light-duty access control. It is an ideal security solution for internal office doors, storage rooms, cupboards, sheds, and garage-to-house doors in both residential and commercial premises.

This digital lock features a dual backplate, giving you the flexibility to enable or disable a hold-open (passage) function during installation. When enabled, the holdback feature allows free entry without entering a code - perfect for high-traffic periods or when moving items between rooms.

The CL155 is easy to install and simple to operate, with a 14-button keypad supporting 4 to 7-digit codes. It is supplied with random, unrecorded codes that can be easily changed in minutes using the tumbler alignment system.

This lock is available in both standard and fire-tested options (tested to BS EN 1634-1) with an optional fire holdback kit. Please select your preferred fire-tested option and specification from the choices below.

Technical Specifications

- **Brand:** Codelocks
- **Series:** CL100 Series
- **Backset:** 60mm
- **Case Depth Required:** 80mm
- **Door Thickness:** 35mm to 65mm

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that's built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks' system for generating **time-sensitive access codes** (think "this code works from 2pm–6pm on Tuesday" rather than "this code works until the heat death of the universe"). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the "serious door" end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the "commercial door that gets slammed 400 times a day" vibe.
