Specification Summary

Brand	Codelocks
Product type	Accessory

Product Description

The Codelocks CL200 Series Back Plate is a high-quality replacement backplate designed specifically to suit the Codelocks CL2255 digital lock. This backplate is supplied as a standalone accessory and features a convenient holdback function, allowing the lock to be set in a passage-free mode when unrestricted access is required.

Constructed with a highly durable, weather-resistant PVD finish, this backplate is built to withstand outdoor elements and heavy usage. It is available in multiple finishes, including Polished Brass and Stainless Steel, with corresponding manufacturer references (P2255 B PB and P255 B SS). Please select your preferred finish and manufacturer reference from the options below to match your existing lock setup.

Please note that to achieve the appropriate fire rating, these digital locks must be fitted with the correct intumescent pack (available separately).

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that's built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks' system for generating **time-sensitive access codes** (think "this code works from 2pm–6pm on Tuesday" rather than "this code works until the heat death of the universe"). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the "serious door" end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the "commercial door that gets slammed 400 times a day" vibe.
