Product type	Codelocks

Product Description

The Codelocks CL4510 Smart Lock is a slim, stylish, and highly advanced electronic digital lock that brings heavy-duty security and smart access control to your fingertips. Combining traditional keypad access with modern Bluetooth technology, this lock is designed for seamless remote management via your smartphone.

With support for up to 350 users, the CL4510 offers versatile entry options, including 100 user codes, 150 MIFARE® smart cards (or fobs/wristbands), and 100 phone clients. Building managers can easily program the lock, distribute smart cards, and track entry history using the compatible Codelocks smart app (such as K3 Connect).

For ultimate flexibility, the lock features Codelocks' innovative NetCode® technology. This allows you to generate and send time-sensitive, temporary codes via email or SMS, which automatically expire after a pre-set duration - making it ideal for holiday lets, service engineers, and delivery staff. Additionally, you can schedule "code-free" periods for open-access hours and download a comprehensive audit trail to monitor building traffic.

Constructed from robust zinc alloy with a satin stainless steel finish, the CL4510 is non-handed, features a 12-button backlit keypad, and includes a key override for emergency access.

Technical Specifications

- **Brand:** Codelocks
- **Model:** CL4510
- **Mechanism:** Electronic Digital & Bluetooth
- **Body Material:** Zinc Alloy
- **Finish:** Satin Stainless Steel
- **Handing:** Non-handed (suitable for left or right-hung doors)
- **Keypad:** 12-button backlit keypad
- **Latch:** 60mm standard tubular latch
- **Spindle:** 8mm spring-loaded
- **Power Supply:** 4 x AA batteries (with low battery warning)
- **Key Override:** Yes
- **Weight:** 2.18kg

Key Features

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that's built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks' system for generating **time-sensitive access codes** (think "this code works from 2pm–6pm on Tuesday" rather than "this code works until the heat death of the universe"). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the "serious door" end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the "commercial door that gets slammed 400 times a day" vibe.
