Specification Summary

Brand	Codelocks
Product type	CL500 Series

Product Description

The Codelocks CL500 PK (Panic Kit) is a heavy-duty mechanical digital front plate designed to provide secure, coded access control from the outside of doors fitted with panic hardware. Supplied with an extra-long spindle, this front-only unit is engineered to work seamlessly with most single-point panic pads or bars.

Constructed for demanding environments, it features a weather-resistant PVD stainless steel finish, making it suitable for both internal and external doors. The outside lever handle is equipped with a protective clutch mechanism to prevent damage to the internal lock if forced. It is fully reversible (non-handed), allowing for easy installation on left or right-hand hung doors.

Please note that this is a front plate only; the panic latch/hardware is not supplied. Before ordering for use with an existing lock case or panic device, please ensure compatibility. An optional "Clean by Codelocks" anti-bacterial finish is also available to special order.

Technical Specifications

- **Brand:** Codelocks
- **Manufacturer Reference:** 0500 SS PK
- **Finish:** Stainless Steel (PVD)
- **Code Length:** 4 to 6 digits
- **Combinations:** 8,000+
- **Door Thickness Compatibility:** 35mm to 65mm
- **Backset:** 60mm
- **Required Case Depth:** 85mm
- **Outside Operation:** Lever handle on entry of code
- **Inside Operation:** Panic latch (not supplied)
- **Handing:** Reversible (non-handed)
- **Key Override:** No
- **Holdback / Passage Mode:** No
- **Weather Resistant:** Yes
- **Width:** 48mm
- **Weight:** 1.36kg

Key Features

- **Panic Kit Integration:** Supplied with an extra-long spindle to work with most single-point panic pads or bars.
- **Heavy-Duty Build:** Designed for high-traffic internal and external door applications.
- **Clutch Protection:** Protective clutch mechanism on the lever handle prevents damage from forced entry attempts.

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that's built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks' system for generating **time-sensitive access codes** (think "this code works from 2pm–6pm on Tuesday" rather than "this code works until the heat death of the universe"). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the "serious door" end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the "commercial door that gets slammed 400 times a day" vibe.
