Specification Summary

Brand	Codelocks
Product type	CL600 Series

Product Description

The Codelocks CL600 PK (Panic Access Kit) is a heavy-duty mechanical coded front plate designed to provide secure, keypad-controlled entry on doors fitted with panic exit hardware. Supplied with an extra-long spindle, it is compatible with most single-point panic pads or bars, allowing you to easily upgrade an emergency exit door to digital access.

A standout feature of the CL600 series is its QuickCode system. This allows you to change the access code in seconds directly on the door, eliminating the need to remove the lock or disassemble any internal components. This makes it an ideal choice for high-traffic environments such as offices, schools, hospitals, and warehouses where codes need to be updated regularly.

Constructed with a robust zinc alloy body and a weather-resistant stainless steel finish, this non-handed unit is suitable for both internal and external doors. It also features a key override function for emergency access, with two keys supplied.

Please note: This is a front-plate-only kit; the panic latch/exit hardware itself is not supplied. Before ordering for use with an existing lock case or panic device, please ensure compatibility.

Technical Specifications

- **Manufacturer Reference:** 600PK
- **Finish:** Stainless Steel
- **Backset:** 60mm
- **Case Depth Required:** 85mm
- **Door Thickness:** 35mm to 65mm

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that's built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks' system for generating **time-sensitive access codes** (think "this code works from 2pm–6pm on Tuesday" rather than "this code works until the heat death of the universe"). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the "serious door" end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the "commercial door that gets slammed 400 times a day" vibe.
