Specification Summary

Brand	Codelocks
Product type	CL600 Series

Product Description

The Codelocks CL620 is a heavy-duty mechanical digital lock from the CL600 series, designed for high-traffic internal and external doors. It features a robust Euro profile mortice sash lock with a double cylinder, three keys, and an integrated anti-panic safety function.

Access is managed via a code on the outside lever, which retracts the latchbolt. For key override, the cylinder allows entry without a code and controls the deadbolt. When the deadbolt is projected, code access is denied from the outside. However, the inside lever handle always retracts both the deadbolt and the latchbolt, ensuring a safe,

quick exit and preventing accidental lock-ins.

A standout feature of the CL600 range is the Quick Code system, allowing you to change the code on the door in seconds without removing the lock.

This lock is available in both fire-tested and non-fire-tested options, with weights ranging from 4.359kg to 4.74kg depending on the selected model. Depending on the variant chosen, it is either supplied with a fire pack or requires an appropriate intumescent pack to achieve its fire rating. Please choose your preferred fire rating, weight, and manufacturer reference from the options below.

Technical Specifications

- **Brand:** Codelocks
- **Series:** CL600 Series
- **Backset:** 55mm
- **Case Depth Required:** 85mm
- **Width:** 58mm
- **Door Thickness:** 35mm to 65mm
- **Code Length:** 4 to 6 digits (14 buttons, 8,000+ combinations)
- **Handing:** Reversible
- **Keys Supplied:** 3
- **Latch:** Euro Profile Mortice Sash Lock
- **Fire Tested:** Yes / No (Option dependent - please choose below)
- **Weight:** 4.359kg to 4.74kg (Option dependent - please choose below)
- **Finish:** Stainless Steel

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that's built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks' system for generating **time-sensitive access codes** (think "this code works from 2pm–6pm on Tuesday" rather than "this code works until the heat death of the universe"). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the "serious door" end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the "commercial door that gets slammed 400 times a day" vibe.
