Specification Summary

Brand	Codelocks
Product type	Codelocks

Product Description

The Codelocks Kitlock KL1050 is a smart, battery-operated proximity cabinet lock designed to provide keyless and codeless access to lockers, cupboards, cabinets, and storage enclosures. It is an ideal solution for both single-user environments (Private Function) and short-term, multi-user settings (Public Function), such as leisure centres, offices, and schools.

Compatible with MIFARE® smartcards, the KL1050 can support up to 50 cards in Private mode, allowing users to utilise existing smartcards without needing to purchase new ones. The lock is highly efficient, delivering up to 15,000 operations from just two AAA batteries. In the event of battery failure, a convenient external 9V battery override can be used across the LED contacts to power the unit and gain access.

Easy to install either as a retrofitted replacement for a standard cam lock or on new installations, the KL1050 is suitable for doors up to 25mm thick. It comes complete with all necessary fixings, templates, and instructions.

Technical Specifications

- **Height:** 136mm
- **Width:** 33mm
- **Depth:** 28mm
- **Door Thickness:** Up to 25mm
- **Power Supply:** 2 x AAA batteries (included)
- **Battery Life:** Up to 15,000 operations
- **Material:** Zinc Alloy

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that's built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks' system for generating **time-sensitive access codes** (think "this code works from 2pm–6pm on Tuesday" rather than "this code works until the heat death of the universe"). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the "serious door" end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the "commercial door that gets slammed 400 times a day" vibe.
