Product Description

The CODELOCKS KitLock KL20 Horizontal Mechanical Combination Lock is a robust, keyless locking solution designed for a wide range of indoor applications. Ideal for personal storage in offices, schools, and colleges, this flush-mounted lock is perfect for securing lockers, cabinets, and cupboards.

With over 10,000 unique 4-digit code combinations, the KL20 offers secure, keyless access that can be easily programmed directly on the door. It features an auto-scramble function, which automatically resets the dials to 0-0-0-0 when the lock is operated. This ensures the user's code remains hidden from onlookers, providing enhanced security.

This lock is available in both left-hand and right-hand configurations to suit your specific door requirements. Please select your preferred handing option from the choices below.

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that's built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks' system for generating **time-sensitive access codes** (think "this code works from 2pm–6pm on Tuesday" rather than "this code works until the heat death of the universe"). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the "serious door" end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the "commercial door that gets slammed 400 times a day" vibe.
