Product Description

The Codelocks KL1000 Battery Operated Digital Cabinet Lock is a compact and convenient electronic keyless solution designed to replace standard keyed cam locks. Perfect for retrofitting on lockers, cabinets, cupboards, and medical carts, this digital lock provides immediate, secure keypad access without the hassle of carrying physical keys. It is also straightforward to install on units that do not have an existing locking device.

Operating on just two AAA batteries, the KL1000 provides up to 15,000 operations. It features a simple 11-button keypad and supports 4-digit user codes. A red LED light flashes to signal a low battery, ensuring you are never locked out unexpectedly. The lock is supplied with a cam and all necessary fixings and templates for a hassle-free installation.

Additionally, "Clean by Codelocks" - an optional photocatalytic finish that reduces bacterial growth by up to 99.96% and combats viruses - is available to special order.

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that's built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks' system for generating **time-sensitive access codes** (think "this code works from 2pm–6pm on Tuesday" rather than "this code works until the heat death of the universe"). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the "serious door" end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the "commercial door that gets slammed 400 times a day" vibe.
