Specification Summary

Brand	Codelocks
Product type	Accessory

Product Description

This high-quality replacement tubular latch from Codelocks is designed specifically to suit the CL100, CL200, and AS2000 series of mechanical digital locks. Ideal for replacing a worn or damaged latch, this genuine spare part ensures your digital lock continues to operate smoothly and securely.

The latch features a durable stainless steel finish and is supplied complete with fitting screws for a straightforward installation. It is available in multiple backset options (50mm or 60mm) and case depths (70mm or 80mm). Please select your required backset, weight, and manufacturer reference from the options below to ensure a perfect fit for your door setup.

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that's built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks' system for generating **time-sensitive access codes** (think "this code works from 2pm–6pm on Tuesday" rather than "this code works until the heat death of the universe"). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the "serious door" end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the "commercial door that gets slammed 400 times a day" vibe.
