Specification Summary

Brand	Evva
Product type	Escutcheon & Rose

Product Description

The EVVA AZG Rim Cylinder Rose is a genuine, high-quality solid metal escutcheon designed specifically to suit EVVA AZG rim cylinders. This durable rose provides a clean, professional finish around your rim cylinder on the outside of the door, protecting the cylinder and enhancing the overall appearance of your door hardware.

Constructed from solid metal, this escutcheon is built to withstand daily use and resist wear. It is available in multiple finishes, including Polished Brass and Nickel Plated, allowing you to match your existing door furniture perfectly. Please select your preferred finish, manufacturer reference, and barcode from the options below.

Whether you are replacing a worn escutcheon or completing a new installation with an EVVA AZG rim cylinder, this genuine accessory ensures a precise fit and reliable performance.

Brand Profile

Evva

EVVA is an Austrian, **family-owned** security manufacturer based in **Vienna**, specialising in high-end **mechanical and electronic locking systems** for everything from homes to large, complex master-keyed organisations. The company was **founded in Vienna in 1919**, and it still runs **research, development, and production** from its Vienna headquarters, exporting globally.

In the trade/spec world, EVVA's reputation is built on **serious key control** and **master key system engineering**—locks designed not just to resist attack, but to keep access hierarchies manageable at scale (offices, hospitals, residential complexes, universities, etc.).

A couple of EVVA's standout mechanical platforms get referenced constantly:

- **ICS (Inner Code System)** – a reversible key system aimed at **highly complex master key structures**, with EVVA citing long patent protection (into the 2030s, depending on jurisdiction).
- **MCS (Magnetic Code System)** – EVVA positions this as a top-tier system for sophisticated master keying, with a strong anti-copying story (including resistance to modern replication methods).

They also explicitly brand themselves around innovation: EVVA talks about holding **200+ patents** and frames its history as "start-up energy since 1919" (which is an absolutely deranged sentence for a century-old lock company, but I respect the audacity).
