Specification Summary

Brand	Evva
Product type	Escutcheon & Rose

Product Description

The EVVA Screw In Cylinder Rose is a high-quality metal escutcheon designed to fit around screw-in cylinders. It provides a neat, flush, and professional finish to your door, covering any unsightly gaps between the cylinder and the door face.

With its durable nickel-plated finish, this cylinder ring is designed to withstand regular use while maintaining its clean, modern appearance. It is a genuine EVVA accessory, ensuring reliable quality and a precise fit for compatible screw-in cylinder lock setups. Ideal for both commercial and residential applications, this rose is easy to install and adds a polished touch to any door hardware configuration.

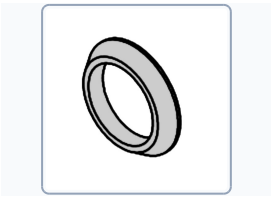

Technical Specifications

- **Brand:** EVVA
- **Finish:** Nickel Plated
- **Manufacturer Reference:** RM NP (L30051)
- **Weight:** 26g
- **Pack Quantity:** 1
- **Packaging:** Loose

Key Features

- **Neat Aesthetics:** Provides a clean, professional finish by covering gaps between the door and the cylinder.
- **Durable Finish:** High-quality nickel-plated construction offers excellent durability and corrosion resistance.
- **Cylinder Compatibility:** Designed specifically for use with screw-in cylinder lock setups.
- **Genuine EVVA Accessory:** Manufactured to high standards for a reliable and precise fit.

Brand Profile

Evva

EVVA is an Austrian, **family-owned** security manufacturer based in **Vienna**, specialising in high-end **mechanical and electronic locking systems** for everything from homes to large, complex master-keyed organisations. The company was **founded in Vienna in 1919**, and it still runs **research, development, and production** from its Vienna headquarters, exporting globally.

In the trade/spec world, EVVA's reputation is built on **serious key control** and **master key system engineering**—locks designed not just to resist attack, but to keep access hierarchies manageable at scale (offices, hospitals, residential complexes, universities, etc.).

A couple of EVVA's standout mechanical platforms get referenced constantly:

- **ICS (Inner Code System)** – a reversible key system aimed at **highly complex master key structures**, with EVVA citing long patent protection (into the 2030s, depending on jurisdiction).
- **MCS (Magnetic Code System)** – EVVA positions this as a top-tier system for sophisticated master keying, with a strong anti-copying story (including resistance to modern replication methods).

They also explicitly brand themselves around innovation: EVVA talks about holding **200+ patents** and frames its history as "start-up energy since 1919" (which is an absolutely deranged sentence for a century-old lock company, but I respect the audacity).
