Specification Summary

Brand	Evva
Product type	Scandinavian Oval

Product Description

The EVVA SKI Internal Scandinavian Thumbturn Cylinder is designed for use on the inside of a door, pairing with an external SKA cylinder (sold separately) to provide a complete locking solution. This internal cylinder allows for a convenient, keyless exit from the inside of the property, making it ideal for applications where quick egress is required.

To ensure a secure installation, the cylinder features two accessible holes. These allow fixing bolts to pass through the lock case and screw directly into the back of the external SKA cylinder on the other side of the door, creating a robust, back-to-back connection.

This cylinder is fitted with an FKN thumbturn as standard and is available in both 5-pin and 6-pin versions. Please select your preferred mechanism and manufacturer reference from the options below.

Technical Specifications

- **Brand:** Evva
- **Cylinder Profile:** Oval
- **Cylinder Type:** Half Oval
- **Finish:** Nickel Plated
- **Mechanism:** 5-pin or 6-pin (please select from the options below)
- **Keys Supplied:** 0
- **Keying Options:** Keyed Alike (KA) and Master Keyed (MK) options available in-house

Key Features

- **Keyless Egress:** Allows quick and easy exit from the inside without the use of a key
- **Secure Installation:** Features two accessible holes for bolt-through fixing into an external SKA cylinder
- **Standard Turn:** Fitted with an FKN thumbturn as standard
- **Compatibility:** Designed specifically for use with external SKA Scandinavian cylinders (sold separately)
- **Multiple Options:** Available in 5-pin and 6-pin versions to match your existing setup

Brand Profile

Evva

EVVA is an Austrian, **family-owned** security manufacturer based in **Vienna**, specialising in high-end **mechanical and electronic locking systems** for everything from homes to large, complex master-keyed organisations. The company was **founded in Vienna in 1919**, and it still runs **research, development, and production** from its Vienna headquarters, exporting globally.

In the trade/spec world, EVVA's reputation is built on **serious key control** and **master key system engineering**—locks designed not just to resist attack, but to keep access hierarchies manageable at scale (offices, hospitals, residential complexes, universities, etc.).

A couple of EVVA's standout mechanical platforms get referenced constantly:

- **ICS (Inner Code System)** – a reversible key system aimed at **highly complex master key structures**, with EVVA citing long patent protection (into the 2030s, depending on jurisdiction).
- **MCS (Magnetic Code System)** – EVVA positions this as a top-tier system for sophisticated master keying, with a strong anti-copying story (including resistance to modern replication methods).

They also explicitly brand themselves around innovation: EVVA talks about holding **200+ patents** and frames its history as "start-up energy since 1919" (which is an absolutely deranged sentence for a century-old lock company, but I respect the audacity).
