Specification Summary

Brand	Exidor
Product type	Panic Latch

Product Description

The Exidor 297 Push Pad Panic Latch is a reliable, surface-mounted rim latch designed for outward-opening emergency exit doors. It is ideal for use in workplaces, offices, and other non-public environments where users are familiar with the escape routes.

This non-handed, fully reversible unit is suitable for single doors as well as the active leaf of double rebated doors. It comes supplied with a standard timber door fixing pack and includes an adaptor to allow operation from the outside via a standard rim cylinder (available separately). Finished in a durable silver enamel, the Exidor 297 is Certifire approved and fully compliant with BS EN 179 standards for emergency exit devices.

Brand Profile

Exidor

Exidor is a UK panic-and-emergency-exit hardware brand best known for **push bars, push pads, and multi-point exit devices** used on fire exits and escape routes in commercial buildings. It's one of those "you don't notice it until you *really* need it" brands—built around reliable, standards-compliant egress hardware.

Exidor says it has been a leading manufacturer in this category for **around 90 years**, and trade/brand info places its establishment at **1931**.

Standards & compliance are central to the brand's positioning: Exidor panic and emergency exit devices are marketed as **CE marked** and **tested to EN 1125 (panic exit devices)** and **EN 179 (emergency exit devices)**—the core European standards that specifiers and installers care about for public buildings and controlled escape routes.

Ownership / group: Exidor was acquired by **ASSA ABLOY Opening Solutions UK & Ireland in 2018** (widely reported in trade press), and Companies House filings list **Assa Abloy Limited** as the controlling party.

Where it sits today: Exidor is now presented as a **range within the UNION family** (ASSA ABLOY's UK door hardware portfolio), and the brand is used across "real world" commercial projects where you might need bespoke finishes, different keep/bolt options, alarms, or microswitch variants for monitoring.
