Product Description

Introducing greenteQ 'Dry Lube'Profile Cylinder Lubrication

Provides long-lasting protection against corrosion.

All profile cylinders need proper maintenance to continue to operate properly for many years after fitting.

greenteQ 'Dry Lube' has been specially formulated in the lab to make locks work better, for longer.

'Dry Lube' cleans, lubricates and protects the cylinder by breaking down deposits deep inside thee lock to ensure perfectly smooth operation.

'Dry Lube' displaces moisture, and can help to free up rusted and frozen locks. Once applied, it forms a barrier that protects against the formation of dirt, dust and rush deposits inside the cylinder lock.

greenteQ 'Dry Lube' is supplied in an easy-application 50ml bottle. We recommend that it is applied to all profile cylinders, locks and padlocks at least every six months. It only takes a minute per door.

Key Features at a glance:

- Keeps the cylinder free from dirt, dust and rust.

- Forms a dry film that dirt cannot cling to
- Provides long-lasting protection against corrosion. Perfect if you live near the coastal regions.
- Water repellent
- Frees up stuck parts
- Quick and easy to apply
- Reduces wear
- Product actively seeks out unprotected surfaces
- Works in temperatures from -47°C up to 170°C!
