Product Description

The ISEO R11 dimple cut security key is widely used across high-security domestic and commercial door locks, as well as complex master key suites. If you require a replacement or additional key, we can cut it precisely to code using our advanced electronic key-cutting machinery.

To order, simply locate the unique code engraved on the head of your original key or printed on your security card (typical prefixes include CAA, EDL, and CFA). Enter this code into the provided box before checking out.

Please Note: If your key is part of a registered master key system, we will require a signed letter of authority from the building owner or authorised system administrator before we can proceed with cutting. This security measure ensures your system remains fully protected. If further authorisation is needed, our team will contact you via email.

Technical Specifications

- **Manufacturer:** ISEO
- **Key Type:** Dimple cut security key
- **Compatible Locks:** ISEO R11 cylinders (domestic, commercial, and master key suites)
- **Common Code Prefixes:** CAA, EDL, CFA, AGL

Brand Profile

ISEO

ISEO (often written **ISEO Serrature**) is an Italian access-solutions manufacturer best known for **cylinders, locks, padlocks, panic/escape hardware, and mechatronic + digital access control**. The group is headquartered in **Pisogne (Brescia), Northern Italy**, on the shores of **Lake Iseo**—which is where the name comes from.

The company was **founded in 1969** by **Giuseppe Facchinetti**, originally producing **locks, cylinders and padlocks** before expanding into broader access control. Today, ISEO presents itself as a global access-control player with **1,000+ employees**, a presence in **100+ countries**, **13 branches**, and **4 manufacturing plants** (listed as Italy, France, Germany, and Romania).

Where ISEO gets especially relevant for modern installs is the bridge between **mechanical security** and **connected access**. Their “Connected Smart / ARGO” ecosystem is marketed for residential and light-commercial sites, using an app-centric approach to manage access and operate compatible devices like electronic cylinders (e.g., **Libra**).
