Specification Summary

Brand	Kickstop
Product type	Lock Guard

Product Description

The Kickstop 2300 Lock Guard is a highly effective door reinforcement solution designed to strengthen and protect the vulnerable area around a mortice lock on wooden doors. Installing a mortice lock requires removing a significant amount of wood from the door, which can leave it weakened and susceptible to forced entry. This substantial 230mm long by 50mm wide rectangular plate reinforces this area to resist physical attacks.

Supplied as a pair for fitting on both the internal and external sides of the door, the plates are bolted securely together through the door using two tamperproof security bolts. This creates a robust, sandwiched reinforcement that is incredibly difficult to compromise.

This lock guard is available in multiple finishes and mechanism cut-outs to suit your door's hardware. Please choose from the available finish options (including Black, Brasslux, Chrome Plated, and Satin Chrome) and mechanism types (Euro Cylinder or UK Mortice) below to find the perfect match for your security setup.

Technical Specifications

- **Length:** 230mm
- **Width:** 50mm
- **Thickness:** 5mm
- **Weight:** 916g
- **Mechanism Options:** Euro Cylinder or UK Mortice (please select from the options below)
- **Finish Options:** Black, Brasslux, Chrome Plated, or Satin Chrome (please select from the options below)
- **Fixings:** Supplied with 2 tamperproof bolt-through security fixings

Key Features

- **Robust Reinforcement:** Strengthens and reinforces the weakened area of wooden doors around a mortice lock
- **Secure Bolt-Through Design:** Fitted securely with two tamperproof bolts that clamp the plates together through the door
- **Supplied in Pairs:** Includes both internal and external plates for comprehensive, dual-sided protection
- **Easy to Fit:** Simple installation process with all necessary fittings supplied
- **Aesthetic Choice:** Available in a variety of high-quality finishes to complement existing door hardware

Brand Profile

Kickstop

Kickstop is a UK burglary-prevention hardware brand specialising in **secondary door security** for **timber doors and frames**. It's basically the "stop your door being kicked in" ecosystem: steel reinforcers, anti-jemmy plates, and frame-strengthening bars designed to deal with the ugly truth that a traditional timber door often fails at the **frame/keep area** long before the lock itself gives up.

The range was **devised in 1988** by a **family firm of locksmiths and security retailers in East London**, after seeing a growing trend of burglars simply **kicking in** doors. Their premise is simple: morticing and lock fitting removes wood and **weakens the door/edge**, so reinforcing those stress points dramatically increases resistance to forced entry.

What Kickstop is known for (the stuff you'll actually fit):

- **London Bar** – a heavy steel **door-frame reinforcing bar** that secures the area around the **nightlatch/rim lock keep (staple)** to resist splitting and forced opening.
- **Birmingham Bar** – a flat reinforcing strip used to strengthen the frame on the hinge side (or lock side where relevant), also marketed for resisting **jemmy/chisel attacks** on outward-opening doors when fixed externally with security screws.
- **LockGuard / Door Reinforcer plates** – bolt-through steel plates that reinforce the door around **mortice deadlocks/sashlocks** (UK lever, euro, oval), targeting the weakened section created by cutting in the lockcase.
- **StapleGuard** and other keep/strike reinforcers – focused protection for the **frame keep zone**, supplied with security fixings and offered in multiple sizes/finishes.
- **Anti-thrust / anti-jemmy plates** – overlap plates for outward-opening doors, designed to resist levering and prying, sold as part of what they claim is the **largest commercially available** anti-thrust range.

Kickstop positions itself as having **Britain’s largest range** of these reinforcement-style, crime-prevention products, aimed at both the **trade** and competent DIY installs. In short: it’s not “a lock brand,” it’s “make the door and frame stop behaving like wet cardboard under attack.”
