Specification Summary

Brand	Kickstop
Product type	Door Bar

Product Description

The Kickstop 2609 London Door Bar is a highly effective security solution designed to reinforce wooden door frames against forced entry. Traditional wooden frames are prone to splitting and splintering when subjected to physical attacks. This solid steel reinforcing bar counters this vulnerability by strengthening the frame around the most common point of attack - the rim lock or nightlatch.

Featuring a large 'D' shaped staple, the 2609 model is designed to fit over and secure the staple (keep) of a surface-fitted rim lock or cylinder nightlatch measuring up to 30mm x 97mm. It is manufactured from a single continuous length of 5mm thick solid steel with rounded edges, ensuring there are no unsightly welds. The bar is pre-drilled with countersunk holes, allowing the included 2.5-inch No.10 hardened steel woodscrews to sit

completely flush with the surface for a neat, unobtrusive finish.

Easy to install on the internal face of the frame, this 1.83m long bar provides robust resistance against kicking and forcing, giving you peace of mind that your entrance is secure.

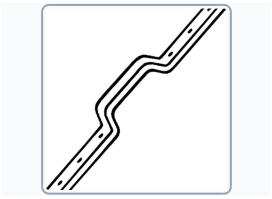

Technical Specifications

- **Length:** 1.83m (1830mm)
- **Width:** 16mm
- **Thickness/Depth:** 5mm
- **Staple Size:** 30mm x 97mm (Large 'D' shape)
- **Finish:** White
- **Material:** Solid steel
- **Fixings:** Supplied with 2.5" No.10 hardened steel woodscrews

Key Features

- **Frame Reinforcement:** Strengthens wooden door frames to resist kicking, splitting, and forced entry.
- **Large 'D' Staple:** Fits over and secures surface-mounted rim lock or nightlatch keeps up to 30mm x 97mm.
- **Seamless Construction:** Manufactured from a single continuous length of high-grade steel with no welds.
- **Flush Finish:** Features rounded edges and countersunk screw holes for a neat, professional installation.
- **Complete Kit:** Supplied with heavy-duty hardened steel woodscrews for immediate installation.

Brand Profile

Kickstop

Kickstop is a UK burglary-prevention hardware brand specialising in **secondary door security** for **timber doors and frames**. It's basically the "stop your door being kicked in" ecosystem: steel reinforcers, anti-jemmy plates, and frame-strengthening bars designed to deal with the ugly truth that a traditional timber door often fails at the **frame/keep area** long before the lock itself gives up.

The range was **devised in 1988** by a **family firm of locksmiths and security retailers in East London**, after seeing a growing trend of burglars simply **kicking in** doors. Their premise is simple: morticing and lock fitting removes wood and **weakens the door/edge**, so reinforcing those stress points dramatically increases resistance to forced entry.

What Kickstop is known for (the stuff you'll actually fit):

- **London Bar** – a heavy steel **door-frame reinforcing bar** that secures the area around the **nightlatch/rim lock keep (staple)** to resist splitting and forced opening.
- **Birmingham Bar** – a flat reinforcing strip used to strengthen the frame on the hinge side (or lock side where relevant), also marketed for resisting **jemmy/chisel attacks** on outward-opening doors when fixed externally with security screws.
- **LockGuard / Door Reinforcer plates** – bolt-through steel plates that reinforce the door around **mortice deadlocks/sashlocks** (UK lever, euro, oval), targeting the weakened section created by cutting in the lockcase.
- **StapleGuard** and other keep/strike reinforcers – focused protection for the **frame keep zone**, supplied with security fixings and offered in multiple sizes/finishes.
- **Anti-thrust / anti-jemmy plates** – overlap plates for outward-opening doors, designed to resist levering and prying, sold as part of what they claim is the **largest commercially available** anti-thrust range.

Kickstop positions itself as having **Britain’s largest range** of these reinforcement-style, crime-prevention products, aimed at both the **trade** and competent DIY installs. In short: it’s not “a lock brand,” it’s “make the door and frame stop behaving like wet cardboard under attack.”
