## Product Description

The Kickstop 9602 Door FrameGuard is a high-security frame reinforcer designed to strengthen wooden door frames around a mortice deadlock, sashlock strike plate, or hinge. By bolting two bevel-edged plates together through the door frame, it provides robust reinforcement to resist forced entry and "kick-in" attacks.

This large-size, narrow-profile frame guard is 300mm long, 20mm wide, and 7mm thick, making it an ideal choice for reinforcing vulnerable areas of your door frame. It is supplied complete with security bolt fixings and clear instructions for installation.

The Kickstop 9602 is available in multiple finishes, including Black, Polished Brass, and White. Please select your preferred finish, manufacturer reference, and barcode from the options below.

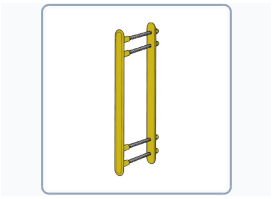

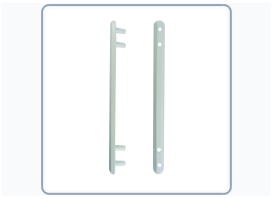

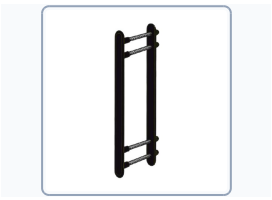

## Technical Specifications

- **Length:** 300mm
- **Width:** 20mm
- **Thickness (Diameter):** 7mm
- **Weight:** 570g
- **Pack Quantity:** 1
- **Packaging:** Bagged
- **Finishes:** Black, Polished Brass, or White (please choose from the options below)
- **Manufacturer References:** 9602BLK, 9602PB, or 9602WH (please choose from the options below)

## Key Features

- **Frame Reinforcement:** Strengthens wooden door frames around mortice locks, strike plates, or hinges
- **Forced Entry Resistance:** Bolted through the door frame to resist kick-in attacks and physical force
- **Bevelled Edge Design:** Features a neat, bevelled edge for a clean and professional appearance
- **Complete Kit:** Supplied with security bolt fixings for a secure installation
- **Multiple Finishes:** Available in Black, Polished Brass, and White to match existing door hardware

## Brand Profile

Kickstop

**Kickstop** is a UK burglary-prevention hardware brand specialising in **secondary door security** for **timber doors and frames**. It's basically the "stop your door being kicked in" ecosystem: steel reinforcers, anti-jemmy plates, and frame-strengthening bars designed to deal with the ugly truth that a traditional timber door often fails at the **frame/keep area** long before the lock itself gives up.

The range was **devised in 1988** by a **family firm of locksmiths and security retailers in East London**, after seeing a growing trend of burglars simply **kicking in** doors. Their premise is simple: morticing and lock fitting removes wood and **weakens the door/edge**, so reinforcing those stress points dramatically increases resistance to forced entry.

What Kickstop is known for (the stuff you'll actually fit):

- **London Bar** – a heavy steel **door-frame reinforcing bar** that secures the area around the **nightlatch/rim lock keep (staple)** to resist splitting and forced opening.
- **Birmingham Bar** – a flat reinforcing strip used to strengthen the frame on the hinge side (or lock side where relevant), also marketed for resisting **jemmy/chisel attacks** on outward-opening doors when fixed externally with security screws.
- **LockGuard / Door Reinforcer plates** – bolt-through steel plates that reinforce the door around **mortice deadlocks/sashlocks** (UK lever, euro, oval), targeting the weakened section created by cutting in the lockcase.
- **StapleGuard** and other keep/strike reinforcers – focused protection for the **frame keep zone**, supplied with security fixings and offered in multiple sizes/finishes.
- **Anti-thrust / anti-jemmy plates** – overlap plates for outward-opening doors, designed to resist levering and prying, sold as part of what they claim is the **largest commercially available** anti-thrust range.

Kickstop positions itself as having **Britain’s largest range** of these reinforcement-style, crime-prevention products, aimed at both the **trade** and competent DIY installs. In short: it’s not “a lock brand,” it’s “make the door and frame stop behaving like wet cardboard under attack.”
