Specification Summary

Brand	Kickstop
Product type	Lock Guard

Product Description

The Kickstop 9619 SashlockGuard is a steel lock guard designed to reinforce and strengthen wooden doors around an existing mortice sashlock. Fitting a mortice lock requires chiselling out a portion of wood, which can leave the door weakened and vulnerable. This universal door reinforcer counters this issue by clamping the door with a robust, bolt-together steel construction.

Featuring an elongated spindle slot and a universal keyway, the SashlockGuard is compatible with traditional UK lever, euro profile, and oval profile mortice sashlocks. This design allows you to use the protective plates alongside your existing door furniture without needing to replace your lock.

This product is available in a choice of finishes, including Gold, Grey, and White, to match your door's aesthetic. Please select your preferred finish and manufacturer reference from the options below.

Technical Specifications

- **Brand:** Kickstop
- **Manufacturer Reference:** 9619 G, 9619GR, or 9619WH (please choose from the options below)
- **Length:** 240mm (24cm)
- **Width:** 75mm
- **Thickness:** 3mm
- **Weight:** 820g
- **Finish:** Available in Gold, Grey, or White (please choose from the options below)
- **Pack Quantity:** 1 (supplied as 2 plates and 4 bolts)

Key Features

- **Door Reinforcement:** Strengthens the weakened area of a wooden door where it has been chiselled out to fit a mortice sashlock.
- **Universal Keyway:** Suitable for use with traditional UK lever, euro profile, and oval profile mortice sashlocks.
- **Bolt-Together Construction:** High-strength design featuring two steel plates that bolt securely through the door.
- **Compatible with Existing Hardware:** Elongated spindle slot and universal keyway allow you to use the plates with your existing lock furniture.
- **Multiple Finishes:** Available in a range of finishes to complement your existing door hardware.

Brand Profile

Kickstop

Kickstop is a UK burglary-prevention hardware brand specialising in **secondary door security** for **timber doors and frames**. It's basically the "stop your door being kicked in" ecosystem: steel reinforcers, anti-jemmy plates, and frame-strengthening bars designed to deal with the ugly truth that a traditional timber door often fails at the **frame/keep area** long before the lock itself gives up.

The range was **devised in 1988** by a **family firm of locksmiths and security retailers in East London**, after seeing a growing trend of burglars simply **kicking in** doors. Their premise is simple: morticing and lock fitting removes wood and **weakens the door/edge**, so reinforcing those stress points dramatically increases resistance to forced entry.

What Kickstop is known for (the stuff you'll actually fit):

- **London Bar** – a heavy steel **door-frame reinforcing bar** that secures the area around the **nightlatch/rim lock keep (staple)** to resist splitting and forced opening.
- **Birmingham Bar** – a flat reinforcing strip used to strengthen the frame on the hinge side (or lock side where relevant), also marketed for resisting **jemmy/chisel attacks** on outward-opening doors when fixed externally with security screws.
- **LockGuard / Door Reinforcer plates** – bolt-through steel plates that reinforce the door around **mortice deadlocks/sashlocks** (UK lever, euro, oval), targeting the weakened section created by cutting in the lockcase.
- **StapleGuard** and other keep/strike reinforcers – focused protection for the **frame keep zone**, supplied with security fixings and offered in multiple sizes/finishes.
- **Anti-thrust / anti-jemmy plates** – overlap plates for outward-opening doors, designed to resist levering and prying, sold as part of what they claim is the **largest commercially available** anti-thrust range.

Kickstop positions itself as having **Britain’s largest range** of these reinforcement-style, crime-prevention products, aimed at both the **trade** and competent DIY installs. In short: it’s not “a lock brand,” it’s “make the door and frame stop behaving like wet cardboard under attack.”
