Specification Summary

Brand	Kickstop
Product type	Door Bar

Product Description

The KICKSTOP 9631 London Door Bar is a heavy-duty door frame reinforcing bar designed to strengthen wooden door frames against forced entry. It features an extra-large 'D' shaped staple that fits securely over the staple (keep) of a surface-mounted rim lock or cylinder nightlatch. By screwing directly onto the internal face of the frame on the lock side, this steel anti-burglary device effectively resists kicking, splitting, and forcing of the door.

Constructed from a 5mm thick solid steel bar with rounded edges, it features countersunk holes to ensure the fixing screws sit flush with the surface. The 9631 version is specifically designed for extra-large staple sizes of up to 40mm x 105mm. It is supplied complete with a packet of 2.5-inch long No.10 hardened steel woodscrews for secure installation.

This door bar is available in a choice of finishes, including White and Dark Brown, to match your interior decor. Please select your preferred finish and manufacturer reference from the options below.

Technical Specifications

- **Length:** 1.98m
- **Width:** 20mm
- **Thickness:** 5mm
- **Staple Size:** 40mm x 105mm
- **Material:** Solid steel
- **Finishes Available:** White or Dark Brown (please select from the options below)
- **Pack Quantity:** 1
- **Supplied Screws:** 2.5" No.10 hardened steel woodscrews

Key Features

- **Frame Reinforcement:** Strengthens wooden door frames against kicking, splitting, and forced entry.
- **Extra-Large Staple:** Designed to fit over rim lock keeps up to 40mm x 105mm.
- **Flush Fitting:** Countersunk holes allow the included hardened steel woodscrews to sit flush with the bar.
- **Solid Construction:** Made from 5mm thick steel with rounded edges for a neat and secure installation.
- **Multiple Finishes:** Available in White or Dark Brown to suit your door frame.

Brand Profile

Kickstop

Kickstop is a UK burglary-prevention hardware brand specialising in **secondary door security** for **timber doors and frames**. It's basically the "stop your door being kicked in" ecosystem: steel reinforcers, anti-jemmy plates, and frame-strengthening bars designed to deal with the ugly truth that a traditional timber door often fails at the **frame/keep area** long before the lock itself gives up.

The range was **devised in 1988** by a **family firm of locksmiths and security retailers in East London**, after seeing a growing trend of burglars simply **kicking in** doors. Their premise is simple: morticing and lock fitting removes wood and **weakens the door/edge**, so reinforcing those stress points dramatically increases resistance to forced entry.

What Kickstop is known for (the stuff you'll actually fit):

- **London Bar** – a heavy steel **door-frame reinforcing bar** that secures the area around the **nightlatch/rim lock keep (staple)** to resist splitting and forced opening.
- **Birmingham Bar** – a flat reinforcing strip used to strengthen the frame on the hinge side (or lock side where relevant), also marketed for resisting **jemmy/chisel attacks** on outward-opening doors when fixed externally with security screws.
- **LockGuard / Door Reinforcer plates** – bolt-through steel plates that reinforce the door around **mortice deadlocks/sashlocks** (UK lever, euro, oval), targeting the weakened section created by cutting in the lockcase.
- **StapleGuard** and other keep/strike reinforcers – focused protection for the **frame keep zone**, supplied with security fixings and offered in multiple sizes/finishes.
- **Anti-thrust / anti-jemmy plates** – overlap plates for outward-opening doors, designed to resist levering and prying, sold as part of what they claim is the **largest commercially available** anti-thrust range.

Kickstop positions itself as having **Britain’s largest range** of these reinforcement-style, crime-prevention products, aimed at both the **trade** and competent DIY installs. In short: it’s not “a lock brand,” it’s “make the door and frame stop behaving like wet cardboard under attack.”
