Specification Summary

Brand	Kickstop
Product type	Anti Thrust Plate

Product Description

The Kickstop AT2 Large Anti-Thrust Plate is a robust security solution designed to protect outward-opening single doors and double doors from forced entry. By covering the vulnerable gap between the door and the frame, this plate prevents intruders from using jemmies, crowbars, or other tools to manipulate the latch or bolt.

Constructed from heavy-duty 3mm thick steel, this 480mm long plate offers exceptional strength and physical resistance. It features countersunk fixing holes to ensure a flush, tamper-resistant finish when installed. To further enhance security, the plate is supplied complete with Sentinel security woodscrews, which are designed to resist unauthorised removal.

Easy to fit and highly effective, the Kickstop AT2 is an ideal retrofit security upgrade for both commercial and residential properties.

Technical Specifications

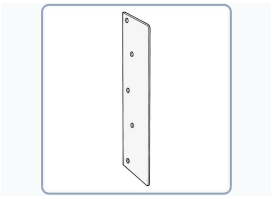

- **Length:** 480mm
- **Width:** 80mm
- **Thickness:** 3mm
- **Material:** Steel

- **Finish:** Satin Chrome
- **Weight:** 980g
- **Pack Quantity:** 1
- **Suitable For:** Single outward-opening doors or double doors

Key Features

- **Physical Protection:** Overlaps the gap between the door and frame to protect against jemmying and physical attack.
- **Tamper-Resistant Fixings:** Supplied with Sentinel security screws to prevent unauthorised removal.
- **Flush Finish:** Countersunk fixing holes ensure screws sit flush with the plate surface.
- **Heavy-Duty Construction:** Made from strong 3mm thick steel plate for long-lasting physical security.
- **Easy Installation:** Simple to fit, making it a straightforward security upgrade.

Brand Profile

Kickstop

Kickstop is a UK burglary-prevention hardware brand specialising in **secondary door security** for **timber doors and frames**. It's basically the "stop your door being kicked in" ecosystem: steel reinforcers, anti-jemmy plates, and frame-strengthening bars designed to deal with the ugly truth that a traditional timber door often fails at the **frame/keep area** long before the lock itself gives up.

The range was **devised in 1988** by a **family firm of locksmiths and security retailers in East London**, after seeing a growing trend of burglars simply **kicking in** doors. Their premise is simple: morticing and lock fitting removes wood and **weakens the door/edge**, so reinforcing those stress points dramatically increases resistance to forced entry.

What Kickstop is known for (the stuff you'll actually fit):

- **London Bar** – a heavy steel **door-frame reinforcing bar** that secures the area around the **nightlatch/rim lock keep (staple)** to resist splitting and forced opening.
- **Birmingham Bar** – a flat reinforcing strip used to strengthen the frame on the hinge side (or lock side where relevant), also marketed for resisting **jemmy/chisel attacks** on outward-opening doors when fixed externally with security screws.
- **LockGuard / Door Reinforcer plates** – bolt-through steel plates that reinforce the door around **mortice deadlocks/sashlocks** (UK lever, euro, oval), targeting the weakened section created by cutting in the lockcase.
- **StapleGuard** and other keep/strike reinforcers – focused protection for the **frame keep zone**, supplied with security fixings and offered in multiple sizes/finishes.
- **Anti-thrust / anti-jemmy plates** – overlap plates for outward-opening doors, designed to resist levering and prying, sold as part of what they claim is the **largest commercially available** anti-thrust range.

Kickstop positions itself as having **Britain’s largest range** of these reinforcement-style, crime-prevention products, aimed at both the **trade** and competent DIY installs. In short: it’s not “a lock brand,” it’s “make the door and frame stop behaving like wet cardboard under attack.”
