Specification Summary

Brand	Kickstop
Product type	Anti Thrust Plate

Product Description

The Kickstop AT3EU Extra Long Anti-Thrust Plate is a robust security solution designed to protect outward-opening doors from forced entry. Manufactured from heavy-duty 3mm thick steel, this plate overlaps the edge of the door to cover the gap between the door and the frame, preventing intruders from using jemmies, crowbars, or other tools to tamper with the lock bolt.

Specifically designed to suit Euro profile deadlocks, the AT3EU features a pre-cut Euro keyway. This extra-long 280mm plate is fully reversible and non-handed, thanks to screw holes that are countersunk on both sides. It is supplied complete with Sentinel security screws for a secure, tamper-resistant installation.

Technical Specifications

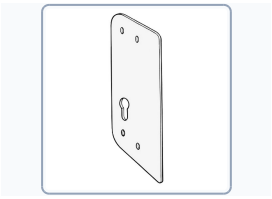

- **Brand:** Kickstop
- **Manufacturer Reference:** AT3EU
- **Height:** 280mm
- **Width:** 100mm
- **Thickness:** 3mm

- **Finish:** Satin Chrome
- **Keyway Cutout:** Euro Profile Cylinder
- **Handing:** Reversible (for outward opening doors)
- **Weight:** 638g
- **Pack Quantity:** 1

Key Features

- **Enhanced Security:** Overlaps the gap between the door and frame to protect the lock bolt from physical attack and jemmying.
- **Euro Profile Compatibility:** Features a pre-cut Euro keyway designed to fit over Euro cylinder mortice deadlocks.
- **Reversible Design:** Non-handed plate with holes countersunk on both sides for easy, flexible installation.
- **Tamper-Resistant Fixings:** Supplied complete with high-security Sentinel screws to prevent unauthorised removal.
- **Durable Construction:** Made from robust 3mm thick steel with a high-quality Satin Chrome finish.

Brand Profile

Kickstop

Kickstop is a UK burglary-prevention hardware brand specialising in **secondary door security** for **timber doors and frames**. It's basically the "stop your door being kicked in" ecosystem: steel reinforcers, anti-jemmy plates, and frame-strengthening bars designed to deal with the ugly truth that a traditional timber door often fails at the **frame/keep area** long before the lock itself gives up.

The range was **devised in 1988** by a **family firm of locksmiths and security retailers in East London**, after seeing a growing trend of burglars simply **kicking in** doors. Their premise is simple: morticing and lock fitting removes wood and **weakens the door/edge**, so reinforcing those stress points dramatically increases resistance to forced entry.

What Kickstop is known for (the stuff you'll actually fit):

- **London Bar** – a heavy steel **door-frame reinforcing bar** that secures the area around the **nightlatch/rim lock keep (staple)** to resist splitting and forced opening.
- **Birmingham Bar** – a flat reinforcing strip used to strengthen the frame on the hinge side (or lock side where relevant), also marketed for resisting **jemmy/chisel attacks** on outward-opening doors when fixed externally with security screws.
- **LockGuard / Door Reinforcer plates** – bolt-through steel plates that reinforce the door around **mortice deadlocks/sashlocks** (UK lever, euro, oval), targeting the weakened section created by cutting in the lockcase.
- **StapleGuard** and other keep/strike reinforcers – focused protection for the **frame keep zone**, supplied with security fixings and offered in multiple sizes/finishes.
- **Anti-thrust / anti-jemmy plates** – overlap plates for outward-opening doors, designed to resist levering and prying, sold as part of what they claim is the **largest commercially available** anti-thrust range.

Kickstop positions itself as having **Britain’s largest range** of these reinforcement-style, crime-prevention products, aimed at both the **trade** and competent DIY installs. In short: it’s not “a lock brand,” it’s “make the door and frame stop behaving like wet cardboard under attack.”
