Specification Summary

Brand	Kickstop
Product type	Anti Thrust Plate

Product Description

The Kickstop AT5 Anti-Thrust Plate is a high-security solution designed to protect outward-opening doors and double doors fitted with a mortice sashlock. Manufactured from robust 3mm thick steel, this plate bridges the gap between the door and the frame, shielding the latch and bolt from external tampering, jemmying, and physical attack.

This versatile plate is fully reversible and non-handed, featuring countersunk screw holes on both sides to allow for quick and easy installation on either left or right-handed doors. It comes complete with tamper-resistant Sentinel security screws, ensuring a secure, permanent fit that resists unauthorised removal. Finished in satin chrome, the AT5 provides a clean, modern aesthetic while significantly reinforcing your property's security.

Technical Specifications

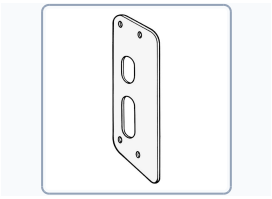

- **Height:** 240mm
- **Width:** 100mm
- **Depth:** 3mm
- **Finish:** Satin Chrome
- **Material:** Steel

- **Screw Centres:** 230mm (Vertical) & 37mm (Horizontal)
- **Weight:** 512g
- **Pack Quantity:** 1

Key Features

- **Anti-Jemmy Protection:** Overlaps the gap between the door and frame to protect the sashlock bolt and latch from physical attack.
- **Reversible Design:** Non-handed plate with countersunk holes on both sides for easy installation on left or right-opening doors.
- **Sentinel Security Screws:** Supplied with tamper-resistant Sentinel security screws for enhanced fixing strength.
- **Durable Construction:** Made from robust 3mm thick steel with a sleek satin chrome finish.
- **Compatibility:** Specifically designed for use with mortice sashlocks on outward-opening doors or double doors.

Brand Profile

Kickstop

Kickstop is a UK burglary-prevention hardware brand specialising in **secondary door security** for **timber doors and frames**. It's basically the "stop your door being kicked in" ecosystem: steel reinforcers, anti-jemmy plates, and frame-strengthening bars designed to deal with the ugly truth that a traditional timber door often fails at the **frame/keep area** long before the lock itself gives up.

The range was **devised in 1988** by a **family firm of locksmiths and security retailers in East London**, after seeing a growing trend of burglars simply **kicking in** doors. Their premise is simple: morticing and lock fitting removes wood and **weakens the door/edge**, so reinforcing those stress points dramatically increases resistance to forced entry.

What Kickstop is known for (the stuff you'll actually fit):

- **London Bar** – a heavy steel **door-frame reinforcing bar** that secures the area around the **nightlatch/rim lock keep (staple)** to resist splitting and forced opening.
- **Birmingham Bar** – a flat reinforcing strip used to strengthen the frame on the hinge side (or lock side where relevant), also marketed for resisting **jemmy/chisel attacks** on outward-opening doors when fixed externally with security screws.
- **LockGuard / Door Reinforcer plates** – bolt-through steel plates that reinforce the door around **mortice deadlocks/sashlocks** (UK lever, euro, oval), targeting the weakened section created by cutting in the lockcase.
- **StapleGuard** and other keep/strike reinforcers – focused protection for the **frame keep zone**, supplied with security fixings and offered in multiple sizes/finishes.
- **Anti-thrust / anti-jemmy plates** – overlap plates for outward-opening doors, designed to resist levering and prying, sold as part of what they claim is the **largest commercially available** anti-thrust range.

Kickstop positions itself as having **Britain’s largest range** of these reinforcement-style, crime-prevention products, aimed at both the **trade** and competent DIY installs. In short: it’s not “a lock brand,” it’s “make the door and frame stop behaving like wet cardboard under attack.”
