Specification Summary

Brand	Kickstop
Product type	Door Bar

Product Description

The Kickstop DG1 DoorGuard Horizontal Security Bar is an effective and cost-efficient solution designed to reinforce weak or glazed door panels. Often used on rear or side garden doors, these solid steel bars provide instant physical reinforcement to resist forced entry and protect vulnerable areas of your door.

This single steel bar is incredibly easy and quick to install, fitting the width of most standard doors without the need for pre-measuring or complex alterations. It features rounded edges and ends for a neat, safe finish, along with countersunk screw holes for a flush fit.

Supplied with three zinc-plated, hardened steel woodscrews, the DG1 DoorGuard is ideal for internal fixing. If you choose to mount the bar externally, we recommend using security screws or heavy-duty fixings for maximum protection.

Technical Specifications

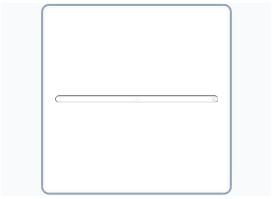

- **Brand:** Kickstop
- **Manufacturer Reference:** DG1WH
- **Length:** 725mm
- **Width:** 20mm

- **Thickness:** 5mm
- **Finish:** White
- **Material:** Steel
- **Pack Quantity:** 1
- **Weight:** 550g
- **Fixings:** Supplied with 3 x zinc-plated hardened steel woodscrews

Key Features

- **Panel Reinforcement:** Specifically designed to strengthen weak or glazed door panels against forced entry.
- **Quick & Easy Installation:** Simple to fit horizontally across standard doors with no pre-measuring required.
- **Safe & Clean Design:** Rounded edges and ends with countersunk screw holes for a neat, flush finish.
- **Versatile Placement:** Fits most doors without alteration and can be positioned to allow access for glass cleaning.
- **Internal or External Fitting:** Recommended for internal installation, or external use when fitted with security screws.

Brand Profile

Kickstop

Kickstop is a UK burglary-prevention hardware brand specialising in **secondary door security** for **timber doors and frames**. It's basically the "stop your door being kicked in" ecosystem: steel reinforcers, anti-jemmy plates, and frame-strengthening bars designed to deal with the ugly truth that a traditional timber door often fails at the **frame/keep area** long before the lock itself gives up.

The range was **devised in 1988** by a **family firm of locksmiths and security retailers in East London**, after seeing a growing trend of burglars simply **kicking in** doors. Their premise is simple: morticing and lock fitting removes wood and **weakens the door/edge**, so reinforcing those stress points dramatically increases resistance to forced entry.

What Kickstop is known for (the stuff you'll actually fit):

- **London Bar** – a heavy steel **door-frame reinforcing bar** that secures the area around the **nightlatch/rim lock keep (staple)** to resist splitting and forced opening.
- **Birmingham Bar** – a flat reinforcing strip used to strengthen the frame on the hinge side (or lock side where relevant), also marketed for resisting **jemmy/chisel attacks** on outward-opening doors when fixed externally with security screws.
- **LockGuard / Door Reinforcer plates** – bolt-through steel plates that reinforce the door around **mortice deadlocks/sashlocks** (UK lever, euro, oval), targeting the weakened section created by cutting in the lockcase.
- **StapleGuard** and other keep/strike reinforcers – focused protection for the **frame keep zone**, supplied with security fixings and offered in multiple sizes/finishes.
- **Anti-thrust / anti-jemmy plates** – overlap plates for outward-opening doors, designed to resist levering and prying, sold as part of what they claim is the **largest commercially available** anti-thrust range.

Kickstop positions itself as having **Britain’s largest range** of these reinforcement-style, crime-prevention products, aimed at both the **trade** and competent DIY installs. In short: it’s not “a lock brand,” it’s “make the door and frame stop behaving like wet cardboard under attack.”
