Product Description

Get replacement or spare keys for your Mul-T-Lock Interactive cylinder cut to code by an Authorised Mul-T-Lock Centre. This professional key cutting service is specifically for keys stamped with '115' or '115S' on the metal shaft.

To order, simply locate the plastic security card supplied with your original cylinder. The card features an embossed code consisting of 5 letters and 5 numbers (for example, ZDACD 01145) at the bottom right. Enter this code into the box provided and select the quantity of keys you require.

As Master Locksmiths, we prioritise your security. We do not include any invoice or paperwork with your order to ensure your address cannot be linked to the keys. For maximum peace of mind, we highly recommend having your keys delivered to an alternative address, such as a workplace, friend, or family member.

Brand Profile

Multlock

Mul-T-Lock (sometimes typed “Multlock”) is an Israeli high-security locking brand best known for **high-security cylinders**, **patented key systems**, and **mechanical + electromechanical access solutions** aimed at locksmiths, institutions, and commercial sites where key control and attack resistance actually matter.

- **Founded: 1973** in Israel (Mul-T-Lock states “founded in Israel in 1973”).
- **Ownership: Fully owned by ASSA ABLOY**; ASSA ABLOY completed the acquisition on **31 Jan 2000** (consolidated from 1 Feb 2000).

What it’s known for (the “why you’d stock it” bit)

- **High-security mechanical cylinders & keys** with strong key-control stories (patented platforms, restricted profiles, etc.).
- **Electromechanical upgrades** (turning “just a cylinder” into managed access) alongside classic mechanical master-keying for bigger sites.
- A big “locksmith channel” identity: Mul-T-Lock explicitly positions itself as a **locksmiths’ preferred partner**, with authorised centres and support tooling.

Tiny lore nugget

Their early growth story is tied to a “multi-directional / four-way” locking concept that helped launch the brand internationally, and later expansion into more advanced cylinder platforms.
