Specification Summary

Brand	Paxton
Product type	Exit Button

Product Description

The Paxton E Series Plastic Exit Buttons are designed to complement Paxton's range of proximity readers and keypads, offering a clean and professional finish for interior access control systems. These robust exit buttons are fully compatible with Paxton Compact, Switch2, and Net2 systems, making them a versatile choice for various door entry setups.

Supplied with a black fascia, these buttons feature an integrated green LED indicator. The LED remains lit continuously and flashes when the button is pressed to provide clear visual confirmation that the door is unlocked (when used with Switch2 and Net2 systems). They are pre-wired with a 5-metre cable for straightforward installation and are designed for surface mounting.

These exit buttons are available in multiple sizes and specifications to suit your installation requirements. Please select your preferred width, depth, weight, and manufacturer reference from the options below.

Technical Specifications

- **Brand:** Paxton
- **Compatibility:** Compact, Switch2, and Net2 systems (controller required)
- **Input Voltage:** 12V DC
- **Current Consumption:** 0.2A
- **Connections:** Pre-wired (5-metre cable)
- **Fitting:** Surface mounted

Brand Profile

Paxton

Paxton is a UK **access control** manufacturer based in **Brighton**, best known for making “security made simple” systems that sit in the sweet spot between **installer-friendly** and **properly scalable**. They design and manufacture their own kit (controllers, readers, credentials, door entry, wireless door handles), and their systems are used to secure **~30,000 buildings each year** across **60+ export countries**.

The company’s roots go back to the mid-80s: **Paxton Access Limited** was incorporated on **22 January 1985**, and the brand points to early products like the **TOUCHLOCK keypad** as part of the origin story that grew into today’s access-control portfolio.

Product-wise, Paxton is mainly known for:

- **Net2** – their networked access control system, centrally administered from one or more PCs and built to scale across multiple doors/sites.
- **Paxton10** – their more modern platform alongside Net2, positioned as a step up in capability (and where they’re pushing higher-security credential tech).
- Plus simpler options like **Standalone / Switch2** for smaller jobs where you want the door secured without turning the install into a networking saga.
