Product type Borg digital locks

Product Description

The Borg Locks 2001 (BL2001) is an entry-level, light-duty mechanical push-button digital lock from the popular BL2000 series. Designed specifically for internal wooden and composite doors, this fully mechanical lock is ideal for low-usage applications such as office doors, storerooms, and residential cupboards where simple access control is required.

As a non-holdback model, the BL2001 provides automatic locking every time the door is closed, ensuring the door remains secure from the outside without the risk of being left unlocked. Authorised users gain entry by entering a code on the external keypad and rotating the thumbturn, while egress from the inside is always free via the paddle handle.

With over 8,000 possible code combinations, a robust anti-thrust tubular latch, and a non-handed design that is fully reversible on-site, the BL2001 offers reliable, hassle-free security without the need for batteries or wiring. It is available in multiple finishes and latch sizes to suit your specific installation requirements.

Brand Profile

Borg digital locks

Borg (trading as **Borg Locks**) is a UK access-control brand best known for **mechanical, keyless push-button door and gate locks**: the classic “no batteries, no wiring, just a code” approach that’s popular for shared doors, staff entrances, plant rooms, gates, and anywhere keys inevitably get lost, copied, or ceremonially dropped down a drain.

Borg has been **designing, creating, and distributing mechanical access-control devices since 1997**, with a product line built around different duty levels and environments - from light internal use to heavy-duty commercial traffic.

The range is deliberately broad and application-led: Borg markets keypad locks for **timber doors, steel doors, aluminium doors, gates**, plus specialist lines like **fire-tested keypads** and **marine-grade/weather-resistant** options for exposed installations.

A big “Borg-ism” you’ll see repeatedly is **easy code management** - for example their **Easicode Pro (ECP)** range is designed for **on-the-door code changes** without removing the lock (useful for rentals, staff turnover, site access, etc.).
