**Specification Summary**

Brand	Codelocks
Product type	Codelocks

**Product Description**

The Codelocks A3 Dual Stand Alone Door Controller with RFID is a compact and highly secure keyless access solution, ideal for small to medium-sized commercial premises. This standalone system combines the convenience of a 12-button keypad with RFID proximity technology, allowing flexible entry via user codes, proximity cards, or a combination of both. It supports up to 600 clients (including code, card, and panic clients) without requiring any external programming, complex software, or ongoing licensing costs.

Designed for durability and reliable performance, the A3 Dual features a robust zinc alloy construction with an IP66 rating, making it suitable for both internal and external installations. Security is enhanced by a configurable penalty time to deter code-guessing, an integrated anti-tamper sensor, and compatibility with alarm and doorbell connections.

For environments requiring heightened hygiene standards, the optional "Clean by Codelocks" finish is available to special order. This ISO-certified photocatalytic coating reduces bacterial growth by up to 99.96% and provides active protection against viruses and environmental toxins.

**Technical Specifications**

- **Brand:** Codelocks
- **Manufacturer Reference:** AL03 DX BK
- **Finish:** Black
- **IP Rating:** IP66 (suitable for internal and external use)
- **User Capacity:** Up to 600 code/card clients (including 2 Panic Clients)
- **Supported RFID Cards:** MIFARE® Classic, MIFARE® DESFire®, and MIFARE Ultralite® (13.56MHz)
- **Keypad:** 12 individual buttons (2 x 6 layout)
- **Lock Dimensions:** 49.5mm x 123mm x 22mm
- **Material:** Zinc Alloy
- **Mounting:** Surface mounted
- **Weight:** 175g

## Key Features

- **Dual Access Control:** Supports keyless entry via keypad code or RFID proximity card for flexible security.
- **Standalone Operation:** Requires no external programming, complex software, or licensing fees.
- **Weatherproof Design:** Conforms to IP66 rating for reliable outdoor and indoor performance.
- **Enhanced Security:** Features an anti-tamper sensor and a configurable penalty time to prevent unauthorised access.
- **Auxiliary Connections:** Compatible with external alarm and doorbell systems.
- **Optional Hygienic Finish:** "Clean by Codelocks" photocatalytic coating available to special order to combat bacteria and viruses.

## Brand Profile

Codelocks

**Codelocks** is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that’s built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks’ system for generating **time-sensitive access codes** (think “this code works from 2pm–6pm on Tuesday” rather than “this code works until the heat death of the universe”). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the “serious door” end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the “commercial door that gets slammed 400 times a day” vibe.
