Specification Summary

Brand	Codelocks
Product type	CL200 Series

Product Description

The Codelocks CL255KO is a premium, light-duty mechanical digital lock from the popular CL200 series. Designed with a dual backplate and a mortice latch, it features a highly convenient key override facility. This key override is particularly useful for cleaning, maintenance, and security staff, allowing immediate access by bypassing the code.

The spring-loaded latch locks automatically when the door is closed, and it is equipped with a deadlocking plunger to prevent unlawful shimming. For added flexibility, a slide button on the backplate can be used to hold open the latchbolt for free entry without entering a code. If required, this hold-open function can be disabled during installation to ensure a code is always required.

This digital lock is available in both fire-tested and non-fire-tested versions. Please choose your preferred option from the selection below. The fire-tested model is supplied complete with an optional fire holdback kit and is tested to BS EN 1634-1 standards. For the non-fire-tested model, an appropriate intumescent pack must be fitted to achieve a fire rating (please see associated products). Depending on the version selected, the weight ranges from 1.229kg to 1.28kg, and the manufacturer reference will vary. Please select your preferred options below.

Technical Specifications

- **Backset:** 60mm
- **Required Case Depth:** 85mm
- **Door Thickness:** Suits doors 35mm to 65mm thick
- **Code Length:** 4 to 6 digits (non-sequential)

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that’s built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks’ system for generating **time-sensitive access codes** (think “this code works from 2pm–6pm on Tuesday” rather than “this code works until the heat death of the universe”). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the “serious door” end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the “commercial door that gets slammed 400 times a day” vibe.
