Specification Summary

Brand Codelocks

Product type Codelocks

Product Description

The Codelocks CL5010 is a heavy-duty, standalone electronic digital door lock designed for high-traffic environments. It is particularly suited for use in healthcare, educational, commercial, and residential settings where reliable, keyless access control is required.

Operating via a standard 60mm tubular mortice latch, the lock features an external lever handle that retracts the latch upon entry of a valid 4 to 6-digit code or by using the key override. The inside lever handle provides a free exit at all times. For added convenience, a code-free passage mode can be programmed directly via the 12-button keypad.

The CL5010 is built for durability and convenience, featuring non-volatile memory that retains all user codes and settings during battery changes. It also includes connections for remote release (such as a reception desk button or alarm system integration), a tamper alarm, and a low battery warning.

This versatile digital lock is available in multiple finishes, weights, and configurations, including standard and fire-tested versions. Please select your preferred finish, fire-testing requirements, and other options from the choices below.

Technical Specifications

- **Backset:** 60mm
- **Required Case Depth:** 95mm
- **Door Thickness:** 35mm to 65mm
- **Power Supply:** 4 x AA batteries (providing up to 200,000 operations)
- **Code Length:** 4 to 6 digits (supporting over 1,000,000 combinations)
- **User Capacity:** Up to 80 user codes
- **Key Override:** Yes (supplied with 2 keys)
- **Handing:** Reversible (fits left and right-handed doors)
- **Finishes Available:** Black or Stainless Steel (please select from the options below)
- **Fire Testing:** Standard and fire-tested (BS EN 1634-1) versions available (please select from the options below)
- **Guarantee:** 2 Year manufacturer's guarantee

Key Features

- **Heavy-Duty Performance:** Designed for high-traffic applications in commercial, educational, healthcare, and residential settings.
- **Non-Volatile Memory:** Retains all programmed codes and settings even when the batteries are being replaced.
- **Dual Operation:** Features lever handle entry via code or key override, with a free-exit lever handle on the inside.
- **Code-Free Passage Mode:** Easily program a code-free option via the keypad for unrestricted access when needed.
- **Remote Release Connections:** Terminals included for remote release via a reception desk button or integration with alarm systems.
- **Security & Alerts:** Equipped with a built-in tamper alarm and a low battery warning indicator.
- **All-Weather Protection:** PVD weather-resistant finish makes it suitable for both internal and external door installations.

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that’s built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks’ system for generating **time-sensitive access codes** (think “this code works from 2pm–6pm on Tuesday” rather than “this code works until the heat death of the universe”). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the “serious door” end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the “commercial door that gets slammed 400 times a day” vibe.
