Specification Summary

Brand	Codelocks
Product type	CL500 Series

Product Description

The Codelocks CL510BB is a heavy-duty, back-to-back mechanical digital lock from the robust CL500 series. Designed to provide secure, coded access in both directions, it features independent keypads on both the inside and outside of the door. This makes it an ideal security solution for high-traffic areas such as offices, schools, hospitals, and commercial buildings.

Operation is straightforward: entering the correct code on either keypad allows the lever handle to retract the heavy-duty tubular mortice latch. When the door closes, the spring-loaded latchbolt automatically locks to maintain security. The unit is fully reversible (non-handed) and suitable for both internal and external doors.

Finished in a durable Stainless Steel PVD, the lock is built to withstand the elements. For environments requiring enhanced hygiene, the optional "Clean by Codelocks" finish is available to special order, featuring an ISO-certified photocatalytic coating that significantly reduces bacterial and viral growth.

Please note: To achieve a fire rating, this lock must be fitted with a compatible intumescent pack. If you are fitting this unit to an existing lock case, please verify compatibility before ordering.

Technical Specifications

- **Brand:** Codelocks
- **Model:** CL510BB (Manufacturer Ref: 0510 SS BB)
- **Backset:** 60mm
- **Case Depth Required:** 85mm
- **Door Thickness:** 35mm to 65mm
- **Finish:** Stainless Steel PVD
- **Handing:** Reversible (non-handed)
- **Buttons:** 12
- **Code Length:** 4 to 6 digits
- **Combinations:** 8,000+
- **Latch:** 60mm standard tubular mortice latch
- **Key Override:** No
- **Holdback:** No
- **Weather Resistant:** Yes
- **Weight:** 2.72kg
- **Width:** 48mm

Brand Profile

Codelocks

Codelocks is a UK-headquartered access-control brand specialising in **keyless push-button locks** for **doors, lockers, cabinets and furniture**—the kind of hardware that’s built to remove keys from the equation without dragging you into a full-blown wired access-control install. The company was **founded in 1991** and is based in **Newbury, Berkshire**, with a global footprint and multiple regional operations.

Their product family spans:

- **Mechanical digital locks** (purely mechanical keypad locks: no batteries, no wiring)
- **Electronic digital locks** (standalone battery-powered locks aimed at higher functionality and audit/control features)
- **Locker locks** under the **KitLock by Codelocks** name, targeting leisure, workplaces, education, and self-storage style installs

A signature differentiator is **NetCode®**: Codelocks’ system for generating **time-sensitive access codes** (think “this code works from 2pm–6pm on Tuesday” rather than “this code works until the heat death of the universe”). NetCodes can be issued through the **Codelocks Connect portal** or related tools, making it popular for short-term access in things like **self-storage, rentals, shared facilities, and managed workplaces**.

On the “serious door” end, their **CL5000** line is positioned as **heavy-duty electronic locks for high-traffic applications** and is marketed with **ANSI Grade 2** testing references - very much the “commercial door that gets slammed 400 times a day” vibe.
