Specification Summary

Brand	Paxton
Product type	Net2

Product Description

The Paxton 692-148 Mifare Classic 1K Proximity ISO Cards offer a reliable, contactless access control solution for commercial and residential premises. Supplied in a convenient pack of 10, these high-quality white proximity cards are designed for seamless integration with Paxton Net2 and Paxton10 readers, as well as compatible third-party systems utilising MIFARE® technology.

Featuring a standard ISO card format without a magnetic stripe, these cards are durable, lightweight, and easy to carry. They provide a secure and efficient way for staff, visitors, or residents to gain access to restricted areas. Simply present the card to a compatible reader for quick, contactless authorisation. Whether you are expanding an existing access control system or replacing lost tokens, these genuine Paxton cards ensure consistent performance and robust security.

Technical Specifications

- **Manufacturer:** Paxton
- **Part Number:** L34426
- **Manufacturer Reference:** 692-148

- **Technology:** MIFARE Classic® 1K (Proximity)
- **Format:** ISO Card (Without Magstripe)
- **Finish:** White
- **Pack Quantity:** 10 cards
- **Weight:** 104g

Brand Profile

Paxton

Paxton is a UK **access control** manufacturer based in **Brighton**, best known for making “security made simple” systems that sit in the sweet spot between **installer-friendly** and **properly scalable**. They design and manufacture their own kit (controllers, readers, credentials, door entry, wireless door handles), and their systems are used to secure **~30,000 buildings each year** across **60+ export countries**.

The company’s roots go back to the mid-80s: **Paxton Access Limited** was incorporated on **22 January 1985**, and the brand points to early products like the **TOUCHLOCK keypad** as part of the origin story that grew into today’s access-control portfolio.

Product-wise, Paxton is mainly known for:

- **Net2** – their networked access control system, centrally administered from one or more PCs and built to scale across multiple doors/sites.
- **Paxton10** – their more modern platform alongside Net2, positioned as a step up in capability (and where they’re pushing higher-security credential tech).
- Plus simpler options like **Standalone / Switch2** for smaller jobs where you want the door secured without turning the install into a networking saga.
