Specification Summary

Brand	Vanderbilt Industries
Product type	Vanderbilt

Product Description

The Vanderbilt Industries Radial Key is designed specifically for use with the V42 standalone keypad (formerly known as the Bewator or Siemens K42). This key is an essential tool for security installers and facilities managers, as it is required to open the keypad's outer housing to access the internal jumper blocks and change the user access codes.

If you have lost your original key or require a spare, these genuine replacement keys are available in several different key numbers. To find the correct key number for your keypad, check the small sticker located on the bottom of the keypad housing, or look for the number stamped onto your existing key or the side of the lock barrel.

These keys are available in multiple manufacturer references, including GBI 98-001, GBI 98-002, GBI 98-004, GBI 98-005, GBI 98-009, and GBI 98-010. Please choose your required option from the list below.
